

ADVENTURE by Scott Adams is like no other program you have ever seen! It was inspired by the large ADVENTURE game found on big college computers in the last few years. Yet it will run on your TRS-80 level 2 16K machine! ADVENTURE is a machine language program using all 16K of your TRS-80. Adventure supports your optional lower case hardware and has a unique split screen video driver with blinking cursor!

As you wander through each Adventure land you issue commands through two word ENGLISH sentences such as: "WALK NORTH" or "LOOK AROUND" or "KILL DRAGON" etc. Each Adventure has over a 100 word vocabulary! ADVENTURE is so written that by changing the data base an entirely different Adventure may be created, so look for many more ADVENTURES in the future. Adventure is so fantastic that the author was asked to speak on it at the Personal Computer Festival of NCC 79! ADVENTURE was also the cover feature of the August, '79 issue of CREATIVE COMPUTING! WARNING: Adventure is very addicting!
